continuous, all-thread rods

Ordinarily, projection windows are constructed using hollow vinyl mullions and an all-thread, or a solid wood mullion connected by lag bolts, screws or clips. Sprouse Bay and Bow windows are manufactured with both solid wood mullions and a continuous all-thread rod. This continuous all-thread construction is a strong and stable connection that prevents warping or sagging of the window frame over time. In addition, it also minimizes condensation problems commonly associated with vinyl mullions.

All frames feature an industry leading hanger system that is easy to install and has zero slip.

insulated sill

A 1-1/2" insulated panel is attached to the hardwood plywood seat to create a 2-3/4" sill with a high R insulating value.
